About

Dynamic and innovative Information Science undergraduate with a proven track record in **full-stack** development, **algorithmic** problem-solving, and collaborative project success. Adapt at building intuitive **web** applications, delivering data-driven solutions, and excelling in **competitive programming**. Recognized for technical excellence and a commitment to enhancing user experiences

Education

BMS Institute of Technology and Management,Bangalore **2021 - 2025**
B.Tech in Information Science & Engineering *8.24/10 CGPA*

Projects

UDDESH AI:AI Career Counsueling Website

- Developed Uddesh AI, an innovative career guidance platform tailored for computer science students. The site offers personalized career path recommendations, curated courses, and expert mentorship. Implemented key features including an informative blog, an interactive chatbot, and seamless video conferencing capabilities to enhance user engagement and support.
- IT uses the **KNN (K-Nearest Neighbours)** algorithm for career path recommendations, which provides approximately 97 percent accuracy.
- Developed a full-stack application utilizing HTML, CSS, JavaScript, and React.js for the frontend, Python for backend logic, and MySQL for database management.

AlgoFlow

- Developed a **React.js** web application to visualize algorithms like **Quicksort, Mergesort, and Dijkstra's** algorithm. Implemented interactive, real-time animations to demonstrate algorithm mechanics and efficiency, enhancing user understanding.
- Exhibited advanced proficiency in **React.js, HTML5, and CSS3** for frontend development, leveraging data structures and algorithmic principles in a practical implementation. Successfully communicated complex concepts through detailed visual representations, demonstrating strong technical capabilities and innovative problem-solving skills.

Contractify

- Developed a simple **web application** using **Java** to create and manage digital contracts. The platform allows users to set up contract terms such as payment conditions and deadlines using pre-made templates. Automated tracking ensures users are notified of progress and milestones, improving efficiency and reducing errors.
- Utilized Java for **backend** development, handling tasks like contract creation, updates, and reminders. **SQL** was employed for data storage, managing contract details, user information, and tracking contract status. This project streamlines contract management, making it easier for users to handle contracts.

Technical Skills

Languages: C, C++, JavaScript, Java
Backend: Node.js, SpringBoot
Frontend: React, HTML, CSS,Bootstrap
Databases: MySQL
Fundamental's: Computer Network,Operating System,Database management System,Object Oriented Programming System(OOPS)
Developer Tools: VS Code, GitHub

Algorithmic Competitions/Achievements

- Solved **300+** DSA problems from LeetCode and GFG, building problem solving skills.
- Won the **First Prize** in 20+ teams in project based learning 2024 for the project Uddesh AI.
- **2nd Prize** winner of **Engenious 2024 Hackathon** in CSE Departement for the project Uddesh AI, which involved three presentation stages, culminating in a tutorial and presentation in the final round.
- **2 star** Rated in CodeChef
- Codeforces rated **971**
- Achieved Rank **7243** in Educational Codeforces Round 157.
- Achieved Global Rank **725** in CodeChef Starters 155 Div 4.
